

Microsoft Power BI Desktop

This two-day course introduces you to the concepts of building dashboards in Microsoft Power BI, starting from the beginning, connecting to a data source and moving onto producing coherent visuals displaying the data and giving us the insight to drive action or business change.

Who should attend?

Business users who need to build and manage their MS Power BI dashboards.

Delegates will be able to

- Get data from all manner of different sources, using Query Editor to manipulate the results
- Create, format and use visualisations (tables, charts, gauges, maps and much more)
- Create calculated columns and measures using basic DAX language.

Prerequisites - An understanding of basic data concepts.

Duration - 2-Day Course

Price - £3000 (for up to 8 delegates)
